

Powerful backup solutions to enhance efficiency

Backup & Replication feature allows you to back up data from one DS2413+ to another DiskStation, or rsync-compatible servers. It also provides the flexibility to restore the server to any particular point in time, and back up modified blocks to optimize storage and processing time. In addition, DS2413+ offers you the capability to back up iSCSI LUNs with no extra charge. Businesses can enjoy efficient backup performance with "Point-in-time copy" technology for data consistency and incremental backup to speed up processing time.
